

EVERY DEGREE MATTERS

DON'T LET THE
HEAT
DEFEAT
YOUR BUSINESS

KEEP IT COOL WITH PORTACOOOL

Whether you're working at a shop or from a home garage, automotive repair in high heat can quickly become unbearable. Steve Pakradooni, owner of ACE Auto Repair in Audubon, New Jersey, was looking for a solution to keep his employees comfortable when the temperatures reached above 90 degrees. Steve found his answer with Portacool portable evaporative coolers.

Since I've started using Portacool products I've never had to close my shop early due to the heat like some garages. If it is 95 degrees outside, we get a 10 degree drop inside using Portacool. It does bring the temperature down! My guys are happy. I keep them cool and working away with no complaints. It makes a huge difference!

-Steve

ACE Auto Repair uses two Portacool™ 16" Three Speed portable evaporative coolers, which cool approximately 900 square feet each. Unlike a fan that simply moves hot, stale air around, Portacool portable evaporative coolers actually cool the air. These American-made products only need a standard electrical outlet and tap water to provide cooling comfort.
